Feature Labs is hiring software engineers (full time and interns) to help us build machine learning automation software.

About Us

Feature Labs (www.featurelabs.com) is a venture-funded early-stage startup based in Boston. The company was started in 2015 to commercialize technology developed in MIT’s Computer Science and Artificial Intelligence Lab.

Our goal is to make it 100 times easier and faster to build new machine learning applications. We do this by automating key steps in the data science process and making that technology available to developers, data scientists, and domain experts.

Our products are already in use by thousands of users around the world and that number is increasing every month.

Who we are looking for

✓ Passionate about making quality and easy-to-use software
✓ You like open source software as much as we do!
✓ Previous experience with Python and/or Javascript
✓ No machine learning experience required if you’re eager to learn
✓ Work in our Boston office overlooking the Public Gardens

Apply at www.featurelabs.com/careers.
